Rohos Logon Key Free Crack Registration Code [Win/Mac]

The flexibility of Logon WLAN Monitor includes the flexibility to configure multiple enterprise wireless network zones, without compromising mobility and ease of use. Key Features: Monitor WLAN activity using key parameters Logon WLAN Monitor displays all wireless LAN data, such as name, IP address, MAC address, RSSI (signal strength) and Wi-Fi Protected Setup (WPS) information. The most comprehensive data will be shown in the title bar (displayed on the right side of the window). You can monitor the data on each node in your WLAN, which will be displayed on the main window. Monitor wireless LAN with network nodes Logon WLAN Monitor will display all of the devices connected to the network, with information like IP address, MAC address, signal strength, up- and down-time and other data. You can display the status of a specific device, and you can also add a new device or change the selected device in real-time. Manage wireless LAN access You can easily manage WLAN access for any PC connected to the wireless network. You can set the access time and the days of the week you want to monitor your wireless network access. Set up network zones To monitor the wireless network activity across a network zone, you can define separate network zones with the different range of IP addresses. When you create a new network zone, you can define the specific wireless network parameters, such as channel, security mode, AP name and SSID. You can have two or more network zones. Monitor wireless network traffic You can monitor traffic across your wireless network, which can be routed using the UPnP/DLNA protocol. You can also monitor all UPnP/DLNA devices and your router's ports. You can easily determine whether UPnP/DLNA traffic is from the Internet. Logon WLAN Monitor Change, delete, add or renew devices To simplify the wireless network management, you can easily update all of the devices connected to your wireless network. In addition, you can easily delete a device from your wireless network, as well as add or renew devices. Monitor Wi-Fi Protected Setup (WPS) You can monitor Wi-Fi Protected Setup (WPS) status, and you can easily manage WPS pushbutton devices. You can set up the WPS access point, monitor the status of WPS-enabled

What's New in the?
