You can configure AddInSpy to scan applications you want to analyze, automatically refresh data and report results. AddInSpy Download: Hello. How do I know which region is my Office installation? I tried with AddInSpy but it does not know which region is installed. The "Local" option is not available in the list. I have Office 2013 on a 64-bit Windows 7 machine. Thank you for any help. Hello. How do I know which region is my Office installation? I tried with AddInSpy but it does not know which region is installed. The "Local" option is not available in the list. I have Office 2013 on a 64-bit Windows 7 machine. Thank you for any help. I have read that the Office 2013 AddinScanEngine.dll can only scan 64-bit Office installations but my Office installation is 32-bit. I'm using a 32-bit version of Word with a 64-bit version of the office suite. How can I get AddInSpy to scan my 32-bit Office installation? I have read that the Office 2013 AddinScanEngine.dll can only scan 64-bit Office installations but my Office installation is 32-bit. I'm using a 32-bit version of Word with a 64-bit version of the office suite. How can I get AddInSpy to scan my 32-bit Office installation? I have read that the Office 2013 AddinScanEngine.dll can only scan 64-bit Office installations but my Office installation is 32-bit. I'm

AddInSpy

You don't have to install any component, unlike the other tools. Download and install the latest version. The interface of AddInSpy is made of a classical window with a simple structure, enabling you to filter hosts by type, such as Microsoft Access, Excel, FrontPage, InfoPath, Outlook, PowerPoint, Project, Publisher, SharePoint Designer, Visio, or Word. You can scan all areas for add-in issues, or just specific ones, such as HKCU or HKLM registry hives, remote, managed or native interfaces, disabled items, or form regions. Scans can be executed on all areas for add-in issues, or just specific ones, such as HKCU or HKLM registry hives, remote, managed or native interfaces, disabled items, or form regions. You can also choose to enable automatic data refresh. Meanwhile, reports with the add-ins, context (machine name, user/domain name, OS, VSTO environment variables) or both kinds of information can be saved as XML files. The utility can be invoked from the command line, or from the command line window of a program such as Visual Studio, and from user interfaces such as WinForms or WPF applications. The trial version of AddInSpy is unsupported. AddInSpy was built with Visual Studio 2008. It runs on Windows XP, Windows Vista, and Windows 7. You can even create your own XML messages, as shown here, as well as, take advantage of these. The table below shows the license information for the one and the trial versions of AddInSpy. AddInSpy Trial License AddInSpy Enter your license key when you register: Visit the Microsoft Help and Support Portal (for information about AddInSpy and how to download it. Change any or all of the values to suit your requirements and download the version of AddInSpy you wish to use. Running AddInSpy After you download and install the version of AddInSpy you want to use, or after you unzip the package, start the utility by double-clicking the.exe file that you extracted. To run a scan, right-click an add-in and select Run Scan. To start a single scan, right-click an add-in and select Single Scan. To run the

What's New in the?
